

PRESSURIZED PLASTIC BOTTLE WITH REINFORCED NECK AND SHOULDER
FOR DISPENSING AN AEROSOL

ABSTRACT

5 A pressure resistant plastic bottle for containing and dispensing an aerosol
composition. The plastic bottle is designed to reduce deformation by a local
reinforcement to the neck and shoulder regions. The reinforcement preferably comprises
the provision of a wall thickness for a lower portion of the neck as compared to the wall
thickness of the upper portion of the neck to be increased by a ratio of from about 1.25:1
10 to about 2.5:1.
